

2026 World Cup — N8X Sportsbook Performance Report

Cross-functional Operations Review · incl. By-Site analysis

Period: 2026-06-12 ~ 07-19 (GMT+8)

Currency: USD

Matches Kickoff: 103 / 104

Providers: 4

Data: snapshot 0719

Bottom line. N8X (three sites combined) over the first 103 matches: **Turnover ~\$15.38M, GGR ~\$873K**, blended **Margin 5.68%** — up further (from 5.50%). Three company-wide signals: (1) revenue is **>90% concentrated in the single provider SABA** (GGR share 92%); (2) **daily Margin is highly volatile** (see Daily Trend) — never conclude from a single day; (3) the real peak, **the knockout stage, is underway** (currently 99% of the schedule). Among the sites, **Bwing Margin is lowest (4.70%)**, but its odds/risk settings are identical to the others — this is customer behavior and variance.

1. Executive Summary — Key Metrics

TURNOVER (HANDLE)

\$15,375,691

avg/match \$149,279

GGR

\$872,910

avg/match \$8,475

MARGIN %

5.68%

GGR÷Turnover

BET COUNT

504,371

total bets

- **103 / 104 matches (99%)** completed; house profitable in **62 matches** (60%).
- Latest trading day (**07/19, 1 match(es)**): **4.8%** of cumulative GGR (\$42,037), Margin **15.03%** on the day, **2.0%** of cumulative bet count (10,056 bets).
- Blended Margin 5.68% sits at the low end of the normal sportsbook range (industry typical 5–8%).
- Avg Turnover/match ~\$149K; house profitable in 62/103 matches (60%).

2. Daily Trend — Match Performance by Day (since the 6/12 kickoff, GMT+8)

Basis: Platform = all providers and all sites combined; each row aggregates every match settled that day. Read the platform total first, then the per-provider Margin% matrix, then the per-provider / per-site amount tables (K = thousand USD; green = house win, red = house loss).

D2. Match-by-Match Detail — each match's share of platform / each site's TO, GGR, own Margin

① "N8X Overall" is the 3-site combined total's share of N8X's cumulative platform total; "Nova88 / Goal123 / Bwing" are each site's own share of that site's own cumulative total — the four tables use independent bases.

② Match Margin% = this match's own GGR ÷ TO (its win/loss efficiency) — a different concept from the share columns, do not conflate the two.

③ Stage is taken from the source data's match stage (Group A–L / Round of 32 / Round of 16 / Quarter-final / Semi-final / Final / 3rd Place); knockout stages are flagged with a red badge.

④ Matches are aligned across sheets by match number (NO); N8X main sheet and the three site tabs have been verified consistent.

N8X Overall (3 sites combined)

Date/Time (GMT+8)	Stage	Match	Turnover	GGR	% of Platform TO	% of Platform GGR	Match Margin%

07/19 05:00	3rd Place	Loser M101 v Loser M102	56,627	1,629	1.64%	1.00%	2.90%
Cumulative (103 matches)			3,461,173	162,532	100.00%	100.00%	4.70%

Terms in plain language:

- **Turnover** = total amount players wagered. Shows how big the business is, not profit.
- **GGR** = what the house actually keeps after paying out winners.
- **Margin** = $GGR \div Turnover$. For every 100 staked, how much the house keeps — how efficiently it wins.
- **CUM. (cumulative)** = everything added up from kickoff to now, not just a single day.
- **TO Share** = this provider's wagers as a % of the whole platform.
- **GGR Share** = this provider's revenue as a % of the whole platform.

3. Provider Performance — provider structure

Provider	Turnover	TO Share	GGR	GGR Share	Margin %	Bet Count
SABA	13,191,213	85.8%	801,442	91.8%	6.08%	398,383
BTI	1,730,507	11.3%	41,637	4.8%	2.41%	91,405
SBO	288,200	1.9%	35,155	4.0%	12.20%	9,696
IM	165,772	1.1%	-5,324	-0.6%	-3.21%	4,887

Provider Mix — Turnover share GGR share

SABA carries the whole platform (Turnover 85.8% / GGR 91.8%) — **single-point dependency is now extreme**. **SBO** is only 1.9% of volume yet has the highest **Margin 12.2%** — an efficient candidate to scale.

4. By Site — deep dive (Nova88 / Goal123 / Bwing)

Site Comparison — three sites (left: volume Turnover right: win efficiency Margin %)

Turnover (USD)

Margin % (efficiency)

How to read this chart: it compares the three sites on two things — **left: who has the volume** (Turnover, total wagers) and **right: who wins efficiently** (Margin). The red dashed line on the right is the platform-average Margin. **A site that is "tall on the left, short on the right" has high volume but poor efficiency — effort for little return.**

Finding: site Margins are **Nova88 6.62%** 、 **Goal123 4.98%** 、 **Bwing 4.70%** (volume: Goal123 > Nova88 > Bwing). **All three sites share identical odds and risk settings**, so Bwing being lower is not a settings issue — it is **differences in customer betting behavior** (player mix / hit rate) and **sample variance**. Differences across sites reflect customer behavior and sample variance; keep monitoring.

🚩 **Note (SBO / IM):** in the per-site provider tables below, **SBO and IM show 0**, meaning **that site had no bets on those two providers this period** (a genuine 0, not missing data). SBO / IM volume on N8X is small overall and not every site carries them; see Section 3 Provider Performance for the platform-level SBO / IM totals.

5. Match-level Volatility

Per-match Margin % — house hold per match (Match 1 → 103)

By match order, Match 1 -> 103 (per-match Margin %)

 **How to read this chart:** each bar = one match. **Green** = house won that match, **red** = players won / house lost; the longer the bar, the bigger the win (or loss). The blue dashed line is the average.

Takeaway: single-match results swing wildly (nobody controls who wins a football match) — big wins and big losses, ranging from **-29% (worst)** to **+53% (best)**. So to judge whether the house is winning, **always look at the cumulative figure, never a single match or a single day.**

6. Top / Bottom Matches by GGR (Top 10 each)

GGR by Match (USD) — Top 10 most profitable vs Bottom 10 worst

Each bar = the house win/loss on one match. **Green (right)** = house won, **Red (left)** = players won / house lost.

Risk pattern: the biggest-loss matches share one trait — **a favorite heavily backed by players that then wins** (France v Spain (07/15 03:00) 、 Spain v Cape Verde (06/16 00:00) 、 England v Norway (07/12 05:00)). **The knockout stage is all top-team clashes with even more concentrated betting**, so this "players backing the right favorite" tail risk will be significantly amplified.

7. Risk & Variance Assessment

Risk	Description	Level
Provider concentration	Single provider SABA holds 91.8% of cumulative GGR ($\geq 90\%$, highly concentrated); a single-point failure is a platform-level risk	High
IM consecutive losses	Cumulative Margin -3.2% (negative) with 5 consecutive days of negative daily Margin — not single-day noise	Critical

8. Cross-functional Action Items

Trading / Risk

- Reduce **SABA single-point dependency**; build failover and settlement-delay alerts.
- **IM has consecutive losses** — check odds parameters, settlement and reconciliation for errors first; pause volume pushes.

Glossary

Term	Definition
Turnover / Handle	Total amount wagered by players (business volume, not revenue).
GGR	Gross Gaming Revenue = Turnover – payouts to players (the actual revenue).
Margin	$GGR \div Turnover$. For every 100 staked, how much the house keeps on average (win efficiency).
Bet Count	Number of confirmed bets (ConfirmBet).
Provider	Sportsbook odds provider (e.g. SABA / BTI / SBO / Pinnacle / 9W / CMD / IM).
Site / Brand	Operating brands under the N8X platform: Nova88 / Goal123 / Bwing.
pp	Percentage point — the absolute difference between two percentages.
Tail risk	Low-probability, high-impact events (e.g. favorites all winning, players piling on the right side).

Data Notes & Methodology

- Source: 《2026 World Cup N8X Performance 0719》 snapshot.
- Platform totals are the sum of all providers (cross-checked against the file's Total column). A few cells containing Match-ID strings are auto-excluded and do not affect the amount totals.
- **Bet Users repeat across matches and cannot be summed into unique users**, so ARPU is not estimated; member-level metrics require a separate data pull.
- "Played" is defined as **single-match Total Turnover > US\$100 and settled** (unsettled early-market matches excluded); amounts in USD; Margin = $GGR \div Turnover$.
