

2026 World Cup — OT (12bet) Sportsbook Performance Report

Cross-functional Operations Review

Period: 2026-06-12 ~ 07-19 (GMT+8)

Currency: USD

Matches Kickoff: 103 / 104

Providers: 6

Data: snapshot 0719

Bottom line. OT over the first 103 matches: **Turnover ~\$42.10M** (~2.7x N8X, strong volume), **GGR ~\$1.27M** and **blended Margin 3.02%** — up further (from 2.99%), still clearly below N8X's 5.68%. The core issue is **concentrated revenue with leakage: SABA contributes ~91% of GGR (\$1.15M)**; see the structure table below for other providers.

1. Executive Summary — Key Metrics

TURNOVER (HANDLE)

\$42,101,984

avg/match \$408,757

GGR

\$1,271,552

avg/match \$12,345

MARGIN %

3.02%

GGR÷Turnover

BET COUNT

835,930

total bets

- 103 / 104 matches (99%)** completed; house profitable in **66 matches** (64%).
- Latest trading day (**07/19, 1 match(es)**): **2.1%** of cumulative GGR (\$26,963), Margin **5.07%** on the day, **1.4%** of cumulative bet count (11,832 bets).
- ~2.7x N8X volume, but **Margin only 3.02%** — still low efficiency.
- ~91% of GGR from SABA**; see structure table below for other providers.

2. Daily Trend — Match Performance by Day (since the 6/12 kickoff, GMT+8)

Basis: Platform = all providers and all sites combined; each row aggregates every match settled that day. Read the platform total first, then the per-provider Margin% matrix, then the per-provider / per-site amount tables (K = thousand USD; green = house win, red = house loss).

A. Platform Total

07/19 05:00	3rd Place	France v England	532,223	26,963	1.26%	2.12%	5.10%
Cumulative (103 matches)			42,101,984	1,271,552	100.00%	100.00%	3.02%

① % of Platform TO / GGR = this match's TO / GGR ÷ the platform's current cumulative total; recalculated as new daily data arrives.

② Match Margin% = this match's own GGR ÷ TO (its win/loss efficiency) — a different concept from the platform-share columns, do not conflate the two.

③ Stage is taken from the source data's match stage (Group A–L / Round of 32 / Round of 16 / Quarter-final / Semi-final / Final / 3rd Place); knockout stages are flagged with a red badge.

B. Daily × Provider — Margin% overview (see every provider, every day at a glance)

Daily × Provider Margin % (— = no bets that day; green = positive, red = negative; last column = platform total, last row = period cumulative)

Terms in plain language:

- **Turnover** = total amount players wagered. Shows how big the business is, not profit.
- **GGR** = what the house actually keeps after paying out winners.
- **Margin** = $GGR \div Turnover$. For every 100 staked, how much the house keeps — how efficiently it wins.
- **CUM. (cumulative)** = everything added up from kickoff to now, not just a single day.
- **TO Share** = this provider's wagers as a % of the whole platform.
- **GGR Share** = this provider's revenue as a % of the whole platform.

Provider Mix — Turnover share GGR share

SABA contributes ~91% of GGR (\$1.15M, Margin 3.39%). SABA concentration remains ~91% of GGR (single-point dependency).

4. Match-level Volatility

Per-match Margin % — house hold per match (Match 1 → 103)

 **How to read this chart:** each bar = one match. **Green** = house won that match, **red** = players won / house lost; the longer the bar, the bigger the win (or loss). The blue dashed line is the average.

Takeaway: single-match results swing wildly (nobody controls who wins a football match) — big wins and big losses, ranging from **-40% (worst)** to **+30% (best)**. So to judge whether the house is winning, **always look at the cumulative figure, never a single match or a single day.**

5. Top / Bottom Matches by GGR (Top 10 each)

GGR by Match (USD) — Top 10 most profitable vs Bottom 10 worst

Each bar = the house win/loss on one match. **Green (right)** = house won, **Red (left)** = players won / house lost.

Risk pattern: OT's large volume means bigger absolute single-match payouts; the worst-loss matches likewise cluster on "a favorite backed by players that wins" (France v Spain (07/15 03:00) \ Germany v Paraguay (06/30 04:30) \ Portugal v DR Congo (06/18 01:00)). Knockout betting is more concentrated, so large single-match exposure needs tight control.

6. Risk & Variance Assessment

Risk	Description	Level
Provider concentration	Single provider SABA holds 90.6% of cumulative GGR ($\geq 90\%$, highly concentrated); a single-point failure is a platform-level risk	High
9W consecutive losses	Cumulative Margin -7.5% (negative) with 3 consecutive days of negative daily Margin — not single-day noise	Critical

7. Cross-functional Action Items

Trading / Risk

- Reduce **SABA single-point dependency**; build failover and settlement-delay alerts.
- **9W has consecutive losses** — check odds parameters, settlement and reconciliation for errors first; pause volume pushes.

Glossary

Term	Definition
Turnover / Handle	Total amount wagered by players (business volume, not revenue).
GGR	Gross Gaming Revenue = Turnover – payouts to players (the actual revenue).
Margin	$GGR \div Turnover$. For every 100 staked, how much the house keeps on average (win efficiency).
Bet Count	Number of confirmed bets (ConfirmBet).
Provider	Sportsbook odds provider (e.g. SABA / BTI / SBO / Pinnacle / 9W / CMD / IM).
Site / Brand	Operating brands under the N8X platform: Nova88 / Goal123 / Bwing.
pp	Percentage point — the absolute difference between two percentages.
Tail risk	Low-probability, high-impact events (e.g. favorites all winning, players piling on the right side).

Data Notes & Methodology

- Source: 《2026 World Cup OT Performance 0719》 snapshot.
- Platform totals are the sum of all providers (cross-checked against the file's Total column). A few cells containing Match-ID strings are auto-excluded and do not affect the amount totals.
- **Bet Users repeat across matches and cannot be summed into unique users**, so ARPU is not estimated; member-level metrics require a separate data pull.
- "Played" is defined as **single-match Total Turnover > US\$100 and settled** (unsettled early-market matches excluded); amounts in USD; $Margin = GGR \div Turnover$.
